WHEELGUIDE

Customer information about rims from the pioneer of the wheel industry

Independent aesthetic for the WINTER: X12

With its unique use of form, which is very effective even in the winter, X12 upgrades every car.

X12

polar-silver, metal-grey, and diamond-black
16" | 17" | 18" For SUV: 19" | 20"

NEW

The X12's appearance is dominated by the five curved double spokes. It unites an agile look and recognizable aesthetic that is suited to numerous different car models. Even in the cold season, X12 makes a strong impression without compromising on lightness. The wheel is available in polar-silver, metal-grey and

diamond-black. Five different sizes, two of which are also available for SUVs, combined with a 5-hole connection, provide a range of applications that is ideal for many vehicles. In addition, all three color variations are ECE-certified and come with the proven RIAL five-year warranty.

How to winterize your car

Year after year, in October at the latest, winter tires are required, winter starts to make itself felt, and road conditions worsen. It's time for responsible drivers to take action to see their vehicles safely through the cold season.

Alloy wheels in the winter?

Of course! High-quality aluminum wheels from RIAL can even withstand the rigors of winter. This is partly thanks to their special surface treatment using a triple-layer powder coating procedure that provides particular protection against damage. The common practice of changing over to steel wheel rims in the winter is no longer necessary, as special properties for harsh street conditions now make alloy wheels a viable alternative to steel wheel rims.

Trust is good, control is better

Check the radiator and windshield anti-freeze and inspect the windshield wipers! The antifreeze for the radiator system should be sufficient for at least minus 25 degrees Celsius, while you should add winter cleaner to the windshield wash fluid. The latter prevents water, pump, and nozzles from freezing. When it comes to the windshield wipers, if the vehicle is

parked outside, the wiper blades should be separated from the windshield overnight using a rubber strip. In this way, you can prevent the wipers from freezing to the windshield and being damaged if they are released abruptly.

Often forgotten, but essential

Take care of the doors and adjust your lights according to the changed lighting conditions! The rubber seals on the doors and trunk lid can be kept smooth with special care products. The door locks can be protected against freezing with non-resinous oils. You should also check the lights on your car. The days are shorter in the winter and you will be driving at night more often, so it's important that your lights are reliable. If you are unsure whether you are able to perform the task by yourself, you can have the lights checked by a workshop if required. If you follow all the technical tips, your car should manage the winter very well.

WINTER TIP

Timeless and sporty with ASTORGA

In the winter, people especially want wheels with a timeless look: ASTORGA presents itself as a clever variation on the classic double-spoke design. Only on closer inspection does it become apparent that the spoke pairs are slightly asymmetrical. Five different sizes, three elegant color variations, and ECE certification for every option leave nothing to be desired. You will be making the right choice with every version!
