TRANSPORTER 2 exudes durability with its powerful spokes. The characteristic design language of this alloy wheel from the TRANSPORTER series underscores the power and versatility of many vehicle models – making a strong statement even in the wintertime. The alloy wheel is available with diamond-black or diamond-black front polished paintwork

and either a 5-hole or 6-hole connection depending on the size. With five different sizes, it has a wide application range covering many vehicles. What's more, RIAL provides a five-year warranty on wheels with diamond-black paintwork.

## Time for a change

Winter is around the corner with its cold, wet weather. That can only mean one thing for car owners: time to have your tires and wheels changed! Read on to find out why seasonal changes are so important and all about the advantages of summer and winter tires over all-season tires.

### When to change

If you're not sure when is the right time to have your tires changed, you can look at the outdoor temperature. In Germany, it is generally recommended to switch to winter tires in October. At the very latest when you encounter slippery winter road conditions with snow or ice, winter tires are an absolute must.

### All-season or seasonal tires?

Are you constantly asking yourself whether it's better to use seasonal tires or their all-season counterparts? If you decide on seasonal tires, you can have them changed by a mechanic. This also gives you a chance to have the brakes and oil gauge checked.

### Winter tires make all the difference

All-season tires have to be adequate for all kinds of weather conditions. They need to handle hot asphalt in the summer just as well as slippery roads in the winter. They are less specialized for this very reason, since this is the only way they can deal with such vastly different weather. Winter tires have better grip in snow and ice than all-season tires. The deep tread ensures the best possible interlocking with the road surface.
